01 PROFILE

Product-minded software engineer with 8 years across engineering and product roles, building production mobile and web products for international teams. Deep expertise in React Native, React, and TypeScript, with hands-on work across iOS/Android native behavior, GraphQL/Apollo data flows, performance, CI/CD, and difficult production debugging. Previously led a multidisciplinary engineering team and more than doubled monthly delivery throughput by turning ambiguous product needs into clear, shippable work.

02 PROFESSIONAL EXPERIENCE

React Native Developer | Entermotion Design Studio Inc | Mar 2023 - Aug 2026

Atlas.md healthcare | Remote

- Helped build the provider-facing Atlas.md Mobile app from the ground up as an early engineer, expanding it across messaging, scheduling, tasks, forms, billing, payments, and financial operations.
- Built and evolved production features across React Native, TypeScript, and platform-specific iOS/Android code for two healthcare applications.
- Designed and debugged complex GraphQL and Apollo Client flows, including multi-step mutations and state synchronization for billing and payment workflows.
- Refactored large components into modular architectures using custom hooks and dedicated utility layers, improving reuse and reducing regression risk.
- Improved FlatList- and SectionList-heavy workflows through memoization and rendering optimizations, resolving performance bottlenecks in patient experiences.
- Investigated production issues across networking, app lifecycle, background execution, memory usage, and device-specific behavior, including tracing a memory crash to a third-party native SDK.
- Resolved build issues spanning Kotlin, CMake, and NDK on Android and CocoaPods and Xcode on iOS, helping keep local development and CI builds stable.

Frontend Developer | Sortium | Aug 2022 - Feb 2023

Digital collectibles | Remote

- Built production frontend experiences for Topps NFT using Next.js, React, TypeScript, and Styled Components; the platform served an estimated 40,000-60,000 active users and handled drops of 5,000+ packs sold within minutes.
- Investigated complex state-management and UI issues across established production flows.
- Designed a composable transactional-email system using reusable layout blocks and backend-driven content for purchases, sales, drops, rewards, and achievements.
- Validated responsive email rendering across Gmail, Outlook, and mobile clients while working around inconsistent CSS support.
- Built responsive, accessible, motion-heavy and 3D-inspired interfaces using lightweight CSS animation.

Product Manager | Popstand | Aug 2021 - Jul 2022

Promoted from Frontend Developer | Healthcare

- Led a multidisciplinary team of approximately five engineers across frontend, backend, and mobile for a US healthcare platform serving 100,000+ users.
- More than doubled monthly delivery throughput by decomposing large Jira items into independently owned UI, API, and mobile workstreams.
- Established peer review, coordinated testing without dedicated QA, and coached engineers on architecture, maintainability, and technical debt.
- Translated client priorities and technical constraints into delivery plans, progress reporting, and production trade-offs.
- Supported operational workflows used in testing events with 2,000+ participants and coordinated production releases with no planned downtime.
- Guided HL7-based public-health reporting integrations across multiple US states, coordinating field mapping, serialization, validation, external approval, and releases.

Frontend Developer | Popstand | Sep 2020 - Aug 2021

Healthcare and Web3 products

- Built the initial structure of a Next.js NFT marketplace across frontend, application APIs, third-party Web3 integrations, deployment, and stakeholder communication.
- Designed and demonstrated a functional prototype that presented dependent blockchain operations for collection and NFT creation as one guided workflow.
- Contributed authentication, responsive layouts, Firebase-backed user data, and notifications to a React Native content-discovery application.
- Developed healthcare workflows for test registration, secure result access, automated notifications, and laboratory operations.

Frontend Web Developer | Fractal Tecnologia | Sep 2019 - Jul 2020

João Pessoa, Brazil

- Built and maintained React and Redux applications using reusable components, Ducks modular architecture, React Hooks, and automated tests.

Development Intern | Fácil Soluções em Informática | Aug 2018 - May 2019

João Pessoa, Brazil

- Developed object-oriented PHP and PostgreSQL features for internal systems with sensitive business data, validation, and established business rules.

03 EARLIER EXPERIENCE AND LEADERSHIP

Helpjuice | Customer Happiness | Apr 2016 - Mar 2017 Supported international customers, investigated issues, documented reproduction steps, and worked with the technical team through resolution.

IEEE Student Branch IFPB | Volunteer Leadership | Feb 2013 - Jun 2015 Led the student branch for one year after serving as deputy leader; managed marketing for a national IEEE student event.

04 CAPABILITIES

Engineering React Native, React, Next.js, TypeScript, JavaScript, GraphQL, Apollo Client, Firebase, iOS, Android, PHP, PostgreSQL

Systems and delivery Performance optimization, production debugging, CI/CD, software architecture, automated testing, technical leadership, product definition, delivery planning, stakeholder communication

Integrations HL7-based reporting, Web3 APIs, transactional email, JSON/CSV data normalization

05 EDUCATION AND CREDENTIALS

Bachelor of Information Technology IFPB | 2016 - 2019

Advanced Front-End Web Nanodegree Udacity Brasil | 2018

Additional studies Electrical and Electronics Engineering, IFPB | 2012 - 2016; Law, Universidade Federal de Rondonia | 2010 - 2012

Languages Portuguese - Native | English - C2 proficient (EF SET 82/100) | Spanish - Elementary

Recognition Winning team, IFPB Science and Technology Education Week Hackathon; winning team, first Expotec GameJam

Certifications Programming with JavaScript | Version Control | Introduction to Mobile Development
